**8.2. Exposure controls****8.2.1 Appropriate engineering controls**

Ensure good ventilation. This can be achieved by local suction or general air extraction. If this is insufficient to maintain the concentration under the WEL or AGW values, suitable breathing protection should be worn. Applies only if maximum permissible exposure values are listed here.

**8.2.2 Individual protection measures, such as personal protective equipment**

General hygiene measures for the handling of chemicals are applicable. Wash hands before breaks and at end of work. Keep away from food, drink and animal feeding stuffs. Remove contaminated clothing and protective equipment before entering areas in which food is consumed.

**Eye/face protection:** Tight fitting protective goggles with side protection (EN 166).

**Skin protection - Hand Protection:** Chemical resistant protective gloves (EN 374). Recommended Protective nitrile gloves (EN 374) Minimum layer thickness in mm: 0,4 Permeation time (penetration time) in minutes: >=480. The breakthrough times determined in accordance with EN374 Part 3 were not obtained under practical conditions. The recommended maximum wearing time is 50% of breakthrough time. Protective hand cream recommended.

**Skin protection -Other:** Protective working garments (e.g. safety shoes EN ISO 20345, long - sleeved working garments)

**Respiratory protection:** Normal not necessary.

**Thermal Hazards:** Not applicable

Addition information on hand protection- No test has been performed. In the case of mixtures, the selection has been made according to the knowledge available and the information about the contents. Selection of materials derived from glove manufacturer's indications. Final selection of glove material must be made taking the breakthrough times, permeation rates and degradation into account. Selection of a suitable glove depends not only on the material but also on the other quality characteristics and varies from manufacture to manufacture. In the case of mixtures, the resistance of glove materials cannot be predicated and must therefore be tested before use. The exact breakthrough time of the glove material can be requested from the protective glove manufacturer and must be observed.
